Healthians

B2B API Integration Doc

01st April 2020

OVERVIEW

This documentation focuses on all the APIs required for integration of Healthians catalog on Partner's Platforms and end to end booking flow.

GOALS

1. Enable users to create a booking for Healthians packages from Partner platforms
2. Capture information about the packages selected by Partner customers and create their bookings accordingly
3. Get details of the customer's information and provide available slots and generate bookings based on the customer's locality.
4. Provide Partner with customer's booking status through order tracking API and push respective reports towards Partner accordingly.

Flow diagram for the API integration :

Steps to be followed for the API integration :

1. **Get Access Token (via API)** :- This API would be required to authenticate all sessions initiated towards healthians from Partner.

2. **Get LAT, LONG AND Zip code to check its Serviceability(checkServiceabilityByLocation_v2)** :- This API would be used by Partner to fetch the serviceable location of healthians.

3. **GET Slots For Location(getSlotsByLocation)** :- This API would be used by Partner to fetch slots of a serviceable location for a specific day.

4. **Freeze Slot For Booking(freezeSlot_v1)** :- This API would be used to book the available slots for booking.

5. **Get Popular packages(getPartnerProducts)** : - This API shall be used to fetch all Partner packages dynamically from healthians.

6. **Create booking** with checksum(**createBooking_v3**) **:-**

    1. Get address. (Home add, Add2, locality, Landmark, city, state, zip code)
    2. Get customer information. -(Name, Age, gender, phone, Email, unique vendor user_id) & related tests and family details.
    3. Coupon discount and summary.
    4. Choose Payment type- prepaid, cod
        i. Notes- Booking flow must have capability for multiple customers with multiple packages in the same booking
        ii. Partner needs to send their unique cust id

- Vendorid matched/exists at our end i.e. repeat customers then we ignore all the other parameters of the user and proceed with booking with partner customer details as booking details.

- Vendorid did not exist at our end i.e. new customer then we check if ph# exists at our end and it's a match then we check gender,name and if they are also matched then we map the HT user with NM vendor id.

- VendorId did not exist at our end i.e. new customer then we check if ph# exists at our end and it's a match then we check gender,name and if they are not matched then we create a new entry for you with your data and proceed the booking.

- VendorID did not exist at our end i.e. new customer then we check if ph# does not exist at our end then we create a new entry and map the HT id with your vendor_id and proceed the booking.

7. **Get Active Zip codes** :- This API can be used by Partner to validate and check the Active and serviceable zipcodes of Healthians.

8. **Get Booking Status** :- This API shall be used by Partner to capture the current order stage of their customer's booking and update them accordingly on their platforms.

9. **Post Report** :- This API shall be used to fetch the customer's report post their booking completion

10. **Cancel booking** :- This API can be used to cancel the booking from Partner's end.

11. **AddOn Booking** :- This API can be used to addon any customer or packages after booking is created.

12. **Reschedule Booking :** This API can be used to reschedule any booking.

13. **setSlotForBooking API** : This API can be used to set the slot for any resampled booking.

14. **getBookingCustomerDigitalValue**: This API can be used to get the digital data for the report of booking customers.

List of booking stages:

Name	Description	Status Code		
Order Booked	Order Booked	BS002		
Cancelled	Order Cancelled	BS003		
Pickup Scheduled	Booking is verified	BS005		
Sample Collector Reached Home	Sample Collector Reached Home	BS006		
Sample Collected	Sample Collected	BS007		
Sample Received at Lab	Sample Received at Lab	BS008		
Report Generated	Report Generated from the Lab but pending for verification	BS009		
Health Counselling	Doctor Consultation Done	BS0012		
Rescheduled	Booking Reschedule	BS0013	ref_booking_id	
Report Available	Report is available and send to customer	BS0015		
Resampling Process Initiated	Resampling Process Initiated	BS0018	ref_booking_id	
Missed Doctor Consultation	Doctor Consultation Call Missed	BS0021		
Reject Sample	Sample got Reject due to some reason	BS0023	ref_booking_id	
Sample Collector's Call Not Picked	Sample Collector's Call Not Picked	BS0026		remarks
Payment issue - hold	Booking is on-hold due to Payment Issue	BS0027		remarks

List of Response Code:

Code	Message
RES0001	Success response
RES0002	Incorrect request data
RES0003	Validation issue
RES0004	Unauthorized access
RES0005	Duplicate booking of customer/billing user
RES0006	Server error occurred
RES0007	Insufficient ecash
RES0008	Max limit of cancel/reschedule/onhold booking reached
RES0009	Gender editing of customer is not allowed if valid report has gone
RES0010	Action that is not allowed on current booking status/any other
RES0011	This Slot is already freezed/not available
RES0012	This zipcode is not serviceable
RES0013	One of the customer already has one active booking
RES0014	Customer Location does not exist within the given zipcode
RES0015	Due to unserviceable area, no Slots are available
RES0016	Lead created
RES0017	Lead updated
RES0018	Order already converted to invoice
RES0019	Booking id does not exist
RES0024	Gift card already used
RES0429	Max limit of calling this API has exceeded
RES0030	Slot id is not related to given city/area
RES0031	Location is not serviceable
RES0032	Insufficient Credit Limit
RES0033	Vendor billing user id already exists
RES0034	This phone number attached with different customer
